

START-UP CORNER (INDOOR)

ASIMOB is the AI & IoT company for the development of advanced mobility services. We develop the Autonomous Road Inspector, to monitor and analyse the road assets and conditions, automatically and digitally, thanks to Computer Vision models and Data Analysis. The monitoring of permanent and temporary (i.e. roadworks) road signage, safety barriers, lane markings and early detection and evaluation of irregularities in the road surface is automatically applied thanks to our solution. We also help to OEMs and Road Authorities in the adaptation of the road physical infrastructure for the deployment of autonomous vehicles.

With the new fiscal rules for company cars that came into effect on July 1, 2023, company fleets are undergoing a significant transformation. Electric company cars are no longer just a vision; they are now a reality. Ethias Lease has developed a solution to address all the challenges that companies and users face during this transition. We are here to provide clear and comprehensive answers, offer high-quality and customized support, and assist in managing both the fleet and infrastructure.

Since the 60s, Ginion Group has been active in the leisure car world. Today, we focus on the leisure car world and the lifestyle which revolves around it. Ginion Group also invests in projects with the aim of creating better ways to live life to the fullest. Our mobility division support companies in transforming their car fleets and their car policies for the better. It's often easier to ask someone outside the company to make these changes and this is why GMS exists.

Pendel's vision is to complement public transport by providing the next-gen of demand-responsive transport - with automated shuttles. We enable Public Transport Operators to cut costs, expand their service areas and improve the value of public transport for passengers. We do this by both delivering the DRT service as such and by providing the necessary public-private partnership, all in a turnkey solution.

Skip the hassle and enjoy the ride: rent your stroller on the go. The Strollo redefines how strollers are designed and used. Anyone can rent a Strollo quickly and easily through an extensive network of pick-up and drop-off points at the bus, tram, or train stations, tourism centers, or other strategic locations in and around the city. The Strollo is designed to be sustainable and circular, with low production costs and long service life. It is made of sturdy, 100% recyclable materials and is easy to repair thanks to the interchangeable parts.
